

Property Management Category — Technical Spec

One-page sketch: category structure, buyer/provider flow, wizard fields, listing card layout.

1. Why It Doesn't Drop Into the Current Flow As-Is

Today every category (home cleaning, pet care, tailoring, taxi/rides, veterinary, bilingual errands) is a single one-off job at one negotiable MXN price, contacted via WhatsApp. Property management is a bundle of recurring responsibilities billed as a monthly retainer, and it requires a materially higher trust bar (a key to someone's home, not a one-time visit). The browse → listing → WhatsApp skeleton is reusable; pricing model, provider vetting, and buyer intake need to be extended.

2. Category Structure

New top-level category chip: “Property Management,” structured as a parent with four sub-services so it reuses the existing card/grid UI instead of a new one.

Sub-service	Included	Billing model
Property Watch (Basic)	Routine walkthroughs, key holding, mail/bill pay, emergency response	Monthly retainer
Maintenance Coordination	Vendor scheduling (plumber, gardener, pool, HOA), invoice tracking	Monthly retainer or per-visit
Rental / Guest Management	Check-in/out, Airbnb/Booking listing upkeep, cleaning turnover, revenue report	Monthly % of rental income or flat fee
Full-Service Bundle	All of the above, single point of contact	Monthly retainer (tiered: Standard / Premium)

3. Buyer Flow

1. Buyer selects “Property Management” category chip — same interaction as existing chips (Home cleaning, Pet care, etc.).
2. Filters reused as-is: colonia (Atascadero, Centro Histórico, Col. Aurora, etc.) and “Near me.” Price slider changes from per-job MXN to monthly retainer range.
3. New short intake form before showing results: property address/colonia, property type (house/condo), occupied or vacant, rental or personal use. Reuses existing colonia field; three new fields.
4. Results show provider cards (layout in §5) with package tier and starting monthly price, not a single job price.
5. Listing marked “Consultation required” instead of an instant WhatsApp quote — nobody commits to a retainer sight-unseen. Tapping it opens WhatsApp with the intake details pre-filled into the message.

4. Provider Onboarding Wizard — Changes

Existing 4-step wizard (Your info → Your service → Terms & conditions → Confirm) is kept; step 2 gets a property-management-specific branch, and step 1 gains verification fields.

Step	Current fields	Added for Property Management
1. Your info	Full name, WhatsApp number	Business/legal name, years operating in SMA, insurance or bonding proof (upload), 2 client references
2. Your service	Category, description, price (negotiable), colonia	Sub-service selection (multi-select from §2), package tiers + monthly price range, property types served, max properties under management
3. Terms & conditions	Standard platform terms	Added clause: key-holding liability, cancellation notice period
4. Confirm	Review & submit	Flag for manual review before “Diamond” eligibility (see §6)

5. Listing Card Layout

Field	Current card (e.g. House Cleaning)	Property Management card
Price	\$600 MXN · negotiable	From \$X,XXX MXN/mo · 3 tiers
Title	“House Cleaning — San Miguel de Allende, SMA”	“Full-Service Property Management — [Colonia], SMA”
Provider	Name + avatar initial	Name + avatar initial + business name
Badges	Diamond, WhatsApp disponible, Telephone ✓	Diamond, WhatsApp disponible, Telephone ✓, + Insured/Bonded ✓ (new)
Distance	“~0.2 km away”	Same — kept as-is
CTA	WhatsApp button → direct chat	“Request consultation” → WhatsApp pre-filled with intake data

6. Trust & Verification (New Requirement)

- Manual review before a Property Management listing can carry the “Diamond” badge — higher stakes than a one-off cleaning gig.
- New badge: “Insured/Bonded ✓”, shown only if proof was uploaded and verified in the wizard.
- Reference check (2 past/current clients) required at onboarding, not just phone verification.
- Cancellation/liability clause added to Terms step to cover key-holding and access risk.

7. Open Questions Before Build

- Does the current “Paid via app” payment rail support recurring monthly billing, or is that a new integration?
- Who performs the manual review for insurance/bonding proof and references — admin dashboard needed?
- Does the intake form (property address, occupied/vacant) get stored per-buyer for reuse on future service requests across categories?
- Should Rental/Guest Management sub-service require proof of legal short-term-rental registration (SMA has local rules)?
